RISCO

Technical Release Note R04-22
Configuration Software 4.0.0

Date	January 10, 2021
Product Line	Configuration Software
Software Ver.	4.0.0

1. Introduction

RISCO Group has released a new version of the Configuration Software (CS) with support of LightSYS Plus and some improvements.

Version details

Software version: 4.0.0.0008

**Software version date:** 6/01/2022

Customer ID list: See Appendix A

CS GUI Languages: See Appendix B

2. Changes

LightSYS Plus

1. MS Screen – adding new flag: SIA IP Channel Information – If enabled, the SIA IP string will be sent to MS with the channel source (IP/GSM).
   Note: On this CS version it appears "SIA Channel Information" will be fixed on the next version to "SIA **IP** Channel Information".

Image 1: SIA IP Channel Information

2. Support up to 63 X 8-Zone-Expander (instead of 35)
3. Remove Payment Timer feature (from System -> Timer screen)
4. Remove Tamper Report (Enable/Disable tamper report to MS) from screen System → Controls → Advanced Control → Advanced.

5. Remove the Siren Mode LS/Bell from the status screen.
6. Encryption enable/disable parameter for Cloud communication (Cloud screen). By default this flag is enabled.
7. Remove 'Payment Expired' from the status screen.
8. Remove 'On Board Tamper' from the status screen. (This tamper is not relevant anymore).
9. Remove 'Confrimed Alarm' from MS Screen → Report Code → Zones tab.
10. Relocate the 'TX Supervison' from the Timers table to the Wireless table (Remain on the same screen of Timers)

Image 2: RX Reporet

11. Change Jamming Behaviour:
    11.1   Remove the "Jamming Time" from System screen.
    11.2   Add "Jamming Detection" flag (this option appears under: System → Controls).
            If flag is enabled, the jamming detection time will be 30 seconds. If disabled, there will be no jamming report.

12. Changing the functionality of '20 Minutes Signal' flags (Control → Advanced Control → EN 50131) :
    12.1   Support on a new status under the Status Screen: "Receiver WM=XX Lost Signal" (new status on Wireless Module - 'L' character - Lost Signal).
    12.2   Add Lost section in receiver report code (event & restore).

Image 3: Lost for the WL Receiver

    12.3   "Wireless Lost Sound" renamed to "Wireless Lost as Tamper" (Y/N option) (In LCD Keypad it appears as "WL lost TMP").
            As well, this feature was relocated to System → Control → Advanced Controls (From System → Sound). The selection is by check box (instead of a combo box).

13. Set the Cloud channel as 'IP Only' by default for all CID (Since the IP is build-in on this panel).

14. MS screen – Report Code → Zones tab - Update the "Lost" report code (Event + Restore) default values to 381 for all customer IDs.

15. Add an option to copy the "Panel ID" (15 digits) from the diagnostic screen.

16. MS screen – Report Codes → Arm/Disarm → Users table – Omtimization - Improving the time of Receive data from panel .

Prosys Plus

1. Support up to 63 X 8-Zone-Expander (instead of 35) for panel version 1.4.4 and above.
2. Remove 'Confrimed Alarm' from MS Screen → Report Code → Zones tab.
3. Relocate the 'TX Supervison' from the Timers table to the Wireless table (Remain on the same screen of Timers)
4. Add an option to copy the "Panel ID" (15 digits) from the diagnostic screen.
5. MS screen – Report Codes → Arm/Disarm → Users table – Omtimization - Improving the time of Receive data from panel .

LightSYS

1. Remove 'Confrimed Alarm' from MS Screen → Report Code → Zones tab.
2. Relocate the 'TX Supervison' from the Timers table to the Wireless table (Remain on the same screen of Timers)
3. Add an option to copy the "Panel ID" (15 digits) from the diagnostic screen.

Agility, Wicomm and Wicomm Pro

1. Remove Payment Timer feature (from System -> Timer screen)

All Panels

1. Panels performance improvement.
2. Direct connection - All the serial port available on PC are displayed in Communication --> Configuration screen.
3. A Proper and friendly pop-up message for panel mismatch:
   "The CS client that you have chosen/created is not suitable for the panel type you are trying to connect to. Please choose/create a new CS client.
4. Hide the installer and sub installer codes in CS (show * instead of digits, just like the other user codes).
5. Fix a security issue – Export BCX file - installer admin details are exposed on the BCX file.
6. Update German, Czech, Dutch, Spanish, French, Greek, Italian, Portuguese, and English UK string resources.

3. Special Note
1. There is no support on Greek language in Agility and WiComm clients.
2. Changing the repeater 2-way location from IDx in panel to IDy by Serial Number, the devices that belong to the repeater will not move automatically.
